# AUNT MARY'S SWEET CORN SEED

---

This Price List of Aunt Mary's Sweet  
Corn Seed Supersedes All Other Lists  
Published Before March 10, 1943.

---

1-4 pound	25c	1-2 pound	50c
1 full pound	\$1.00	2 pounds	\$1.90
3 pounds	\$2.75	4 pounds	\$3.50

At the above prices the seed will be sent by  
parcel post prepaid, anywhere in the United States.

I am glad there are so many people who believe that  
Aunt Mary's sweet corn is the best in the world and  
who without any solicitation not only send me  
their own orders for the seed but who also tell their  
friends to order it. I believe that Aunt Mary's sweet  
corn seed is not only the oldest variety on the  
market but that it is also the only variety for which  
customers pay \$1.00 per pound.

Here are the prices for growers who wish to sell  
the green ears of Aunt Mary's sweet corn on the  
market:

5 to 10 pounds	60c per pound
11 to 15 pounds	55c per pound
16 to 25 pounds	50c per pound

At the above prices the seed will be sent  
anywhere by express, charges collect.

Have you a surplus of Aunt Mary's Sweet Corn Seed?  
The early demand is excellent and it may be necessary for  
me to buy seed to fill late orders.

# Spancross Sweet Corn

## A Very Early Variety

During the last two years I have had satisfactory experience with this very early yellow hybrid sweet corn. One planting produced ears ready for the table in 63 days and the other in 67 days, if I remember correctly. It ripens from 60 to 70 days after planting which is nearly a month earlier than Aunt Mary's. Sweet Corn customers will pay a higher price for green ears of very early sweet corn than they will later in the season. This new variety should be planted only for very early use in both home and commercial gardens and I recommend at least three plantings of it. The first planting to be made on the same day Aunt Mary's is planted. You can wait full two weeks to make the second planting of Aunt Mary's—but the second planting of Spancross should be made in seven or eight days after the first planting, because like many other yellow hybrid corns, the grains remain in edible condition only seven or eight days and then become too hard for table use. The third planting should be made about a week later.

**1-4 pound \_ \_ 15c      7 1-2 ounces - 25c**

At these prices, these two small packages will be sent by prepaid parcel post anywhere in the United States.

The reason I quote on 7½ ounces is that this amount in a container weighing one half ounce requires only 4c postage to be sent anywhere in the United States. A package weighing 8¼ ounces must carry 15c postage when addressed to a customer in Zone 8.

1 pound to 25 pounds will be sent by express, charges collect, to any address in the United States, at 35c per pound.

I believe that many of my customers will be glad to get acquainted with this very early variety which will open the sweet corn season at least three weeks earlier than the standard varieties.
